I became a Christian when I was 22, thanks to the determined efforts of my sister and two friends. My wife Pat and I, met at Inter-Varsity Christian Fellowship at Kalamazoo College. God has blessed us with 28 years of marriage. We have three children and our second grandchild is due shortly! We have home-schooled for 18 years.

I worked as a teacher/naturalist at the Kalamazoo Nature Center for 12 years. Then God encouraged me through some home school friends to teach Christian-oriented science classes to home schoolers. I started these classes in 1991, teaching full-time for 10 years and part-time the past 5 years. I also work full-time at a spice company in Kalamazoo.

Due to my work schedule, my two science classes meet every other week from September through March. These classes focus on Great Lakes biology and life science. We emphasize projects and applied science, and use the text book mostly as a reader.

Physical Science - 14 and 15 year olds

A hands-on, experiment-filled class for high schoolers. Content includes matter and motion, chemical solutions and reactions, acids, bases and metals, chemical and physical changes, energy, levers and pulleys, sound and light. Labs, experiment equipment, and supplies are included.

Text: Bob Jones Press - The Physical World

Fee: \$240

Meets
every-other Thursday.

Earth Science - for 12 and 13 year olds.

A hands-on class about God's non-living creations. Content includes astronomy, weather and atmospheres, minerals and ores, hydrology, rocks and fossils, soil ecology, creation, mountains and rivers. Projects, collections, and experiments are important aspects of the class.

Equipment and supplies are included.

Text: Bob Jones Press - Earth Science

Fee: \$240

Meets every-other Thursday, the same days as Physical.
