

Linda La Lone marklalone1@gmail.com

My main occupation for the last 12 years has been home school mom. I have also enjoyed teaching science to home schooled children for the past 5 years. I became a Christian when I was 13 years old and have enjoyed studying and teaching science from a Christian perspective. I have a Bachelor of Science degree from Western Michigan University.

Elementary Science (K- 4)

We will be doing an in-depth study of Astronomy covering the sun, planets, stars, galaxies, and space travel. Many projects and activities will be done to bring the information to life. Each child will make an astronomy notebook, doing various activities to promote further understanding of the material. I hope you will enjoy reading this wonderful text with your child. Your whole family will enjoy it. The rest of the year will be spent studying the human body. We will make a life-sized outline of each child, and add various organs as we learn about each. I am looking forward to a great year.
